

RFI's: B24 Seismic Corrections and Additions

RFIs:

1. Differential pressure gauge- Where/what are the requirements?

Differential pressure detectors on the second and third floor are indicators of the fire damper positions for these floors. These are to remain in place and operational following the completion of this job.

2. Requirements for refrigeration in Lab to remain in operation?

The VA will be responsible for removal/ storage of all items located in the walk in refrigerators and deep freeze prior to work starting on the third floor laboratory.

3. Will VA need access to refrigerators on third floor during work?

VA will not require access to Refrigerators on the Third floor Laboratory during construction.

4. Does walk in refrigerator need to run even when empty?

NO - Refrigerator will be placed in a storage condition by the Veterans administration during construction.
